

## What is covered in a standard AC installation scope (High wall Split air conditioner – Capacity up to 2.0 TR)

- Mounting and installation of indoor unit on wall
- Placing the outdoor unit at serviceable location
- Drilling one hole on a brick wall (no core cutting) to connect the Outdoor unit (ODU) with the Indoor unit (IDU)
- Laying of interconnect copper pipe between indoor and outdoor unit (if provided with the unit) . Vacuumising the piping along with indoor unit. Approved copper makes to be used
- Laying of drainpipe for water and connecting with indoor unit.
- Connecting ODU and IDU using standard wire length provided by the company and commissioning of the unit.
- Sealing the holes with white cement / POP
- Connecting ac stabilizer if provided by the customer in-between the main power point and the outdoor unit.
- Fixing ODU stand if available
- Checking the machine performance
- Demo of the product

## What is not covered in a standard installation scope, & will involve additional charges!

- Drilling more than one hole for copper pipe connectivity between IDU and ODU
- Thicker concrete wall needs specialized equipment, so drilling holes through them will incur additional cost (core cutting). No wall chiseling / civil or mason work is included
- An additional voltage stabilizer, if there are voltage fluctuations in the area
- Wiring extension from Electricity Meter to Installation site, Power point/MCB fitting and any other Electrical work will be organized by the customer from their side.
- Any extra copper pipe length that might be needed for installation (as per customer's site requirement) beyond the copper pipe supplied with the product and the labour charges for laying this additional copper pipe cost will be borne by customer.
- Grill/glass cutting and welding work will be organized by customer from their side.
- Uninstallation/Shifting of old AC
- Outdoor stand if supplied by customer, labour charges for fixing same has to be borne by customer.
- Ladder to be arranged by customer in case required at installation site.
- In case piping is already pre-laid by customer during construction stage, then nitrogen pressure testing will be required after connecting outdoor and indoor. The cost of the same to be borne by customer.
- Anything else not covered in standard installation will be chargeable.
